

BODY HEALTH

Cyro - Radiofrequency:

The hand piece operates at -10° , thus keeping the epidermis cold, at the same time the radio frequency waves create the desired internal bulk heating necessary to stimulate collagen and elastin. This is an instantaneous effect in a non-invasive way

CAVITATION

Instant Centimetre Loss

Cavitation is a relative new aesthetic treatment. Using leading edge technology it converts fat cell into liquid which can then be naturally drained by the body's own natural filtration system. It aims at all those areas with localized fat: thighs, abdomen, flanks and buttocks but there is no limitation as to areas of the body.

ADVANTAGES OVER OTHER TREATMENTS

- Non invasive treatment
- No need for hospitalization nor anesthesia
- No scars nor long term marking of the skin
- Very little discomfort
- Elimination of the fat through a natural process

Cellulite (Cryo RF)

Same as Cyro-Radiofrequency, only a conductive plate is applied to the body. The frequency then passes through the body, and the body is used to complete the circuit.
